

The Century Project – Update

In our ongoing commitment to keep Team Members informed, below are the updates for the proposed renovation of the Space Needle.

Century Project Updates:

- *On September 29th, we submitted permits with the city for seismic upgrades.*
- *If approved, these upgrades will help us in both earthquake events and handling heavy wind-storms.*
- *The Needle was built to withstand an earthquake of up to 9.1 magnitude and 100+ mile winds.*
- *Our proposal will add reinforcing steel to the Space Needle in key areas so it will withstand a 1000 year earthquake.*
- *We hope to complete the seismic work independently and in advance of any other renovations, with no expected closure.*
- *There are no changes to our prior communications on the Century Project.*

We are still in the early stages of the feasibility for the main renovation project with no clear path for when or how the project will take place. While we don't know If, When, or How this project will evolve, we will continue to update you regularly on any progress.
